

COM-API for WinDarab Expert

- Gives external tools access to WinDarab functionalities

Using COM-API allows some control over WinDarab:

- Attaching to or creating new instances of WinDarab Application
- Data Domain (opened files and overlays)
- Cursor position – View range
- Marked/Tagged range

Users can also compile their application as a WinDarab Plugin. This allows custom buttons and menus on the WinDarab Ribbon. Apart from plugins, applications using COM-API are *out of process communication*.

COM-API can create new measurement files

- A 3rd party application/plugin can use the UserDataFile class to create new measurement files with application generated channel data.
- Files created with the new API are written in WinDarab file format v2 which is supported since WinDarab v7.6.
- A brief example how to write a file can be found in the BMS2ApiSamples.Net project, see the source in CreateUserDataFile.cs.

The application of COM-API requires the Expert-version of WinDarab, it doesn't work with the Free-version.

Legal Restrictions

Generally blocked are direct and indirect business involving high risk destinations, including Russia, Belarus, Cuba, Iran, North Korea, Syria, Libya, Afghanistan, and certain non-governmental controlled Ukrainian regions. This list may change as geopolitics evolve.
